LOCKITNETWORK

MOTION PICTURE COMMUNICATIONS
Produktion

Set **LOCKITNETWORK** MOTION PICTURE COMMUNICATIONS **PostPro**

LockitNetwork **Premium Production Service** establishes the paperless workflow between filmset, production office and post-production in your movie or serial production.

How it works?
The **script supervisor** collects all content-related, technical and organizational information digitally with the **LockitScript iPad app** – LockitNetwork then auto-creates **reports, statistics and post-production files.**

Benefits for **producers and production managers**:

➢ Standardized, digital reports!
  You can download editable daily reports that are generated automatically in the cloud-based LockitWebTools at any time – as Excel or PDF.
➢ Save time in post-production!
  Save 2 hours of work by importing post-production files straight into your editing program instead of typing loads of paper every day.
➢ Keep an eye on your set!
  Create reports live and keep track of what is happening on set.
➢ Better archives!
  All clips shot will automatically be connected with detailed content metadata, so they can be filed without any further effort.
